requirements to complete this part of the programme.

Awarded in Enschede on 2 July 2025

Secretary Examination Board

Dr. Raymond Loohuis

**UNIVERSITY OF TWENTE.**

# BACKGROUND INFORMATION

The Transdisciplinary Master-Insert 'Shaping Responsible Futures' enables motivated students to cross disciplinary boundaries and develop the competences that are essential for tackling pressing societal challenges. It is a 30 EC cross-faculty programme that is hosted by the DesignLab and the Faculty of Engineering Technology at the University of Twente. It is unique in its transdisciplinary approach to societal challenges and its emphasis on skills and attitude training.

The programme consists of three 10 EC master-level courses: Creative Intelligence, Responsible Futuring, and Leading Systemic Change. These courses span a range of topics and competences taught by a transdisciplinary team of more than twenty experts. Among the trained competences are bridging disciplinary values and perspectives, stakeholder engagement, high-level conceptual thinking and problem-solving, dealing with complexity, systems thinking, instigating bottom-up change, and envisioning responsible futures.
